Chapter 1. SURFACE CHARACTERIZATION: COMPOSITION STRUCTURE AND TOPOGRAPHY

S. Speller, W. Heiland, M. Schleberger

1. Introduction	1
2. Ion Scattering Methods	2
2.1. High Energy Ion Scattering	4
2.2. Low Energy Ion Scattering	6
3. Diffraction Methods	13
3.1. X-Ray Diffraction	14
3.2. LEED and RHEED	15
4. Electron Spectroscopy	19
PART I. Quantitative Analysis of Electron Spectra	19
4.1. Formalism	19
4.2. Data Analysis	21
4.3. Auger Electron Spectra	25
PART II. Nanostructures of Semiconductor Systems	27
4.4. Metals on Si(111)	27
4.5. Ge on Si(001)	29
4.6. Amorphous Fe/Si and Fe/Ge	30
5. Scanning Probe Microscopy	33
PART III. Scanning Tunneling Microscopy	33
5.1. Method	33
5.2. Topographies	34
5.3. Scanning Tunneling Spectroscopy	42
PART IV. Atomic Force Microscopy	43
5.4. Topographies	47
5.5. Beyond Topography	47
5.6. Force Spectroscopy	49
Comparative Considerations	49
References	50

Chapter 2. DYNAMIC SURFACE TENSION AND SURFACTANT MASS TRANSFER KINETICS: MEASUREMENT TECHNIQUES AND ANALYSIS

Kathleen J. Stebe, Shi-Yow Lin

1. Introduction	56
2. Thermodynamics	57
2.1. The Frumkin Adsorption Isotherm	57
2.2. Attractive Interactions: Surface-Phase Transformations Among Adsorbed Surfactants	58
2.3. (Apparent) Repulsive Interactions of Nonelectrostatic Origin	59
2.4. The Hard Disk Equation of State	59
2.5. Electrostatic Effects at Interfaces	61

3. Mass Transfer from Solution to the Interface of a Pendant Bubble	62
3.1. Diffusion-Controlled Adsorption	63
3.2. The Importance of Curvature and the Characteristic Diffusion Time	63
3.3. <i>A Priori</i> Sorting of Surfactants: Which Reduce the Surface Tension More Rapidly	64
3.4. Mixed Diffusion-Kinetic-Controlled Adsorption	64
3.5. Shift of Controlling Mechanism	65
3.6. Ionic Surfactants: Diffusion Control	66
3.7. Ionic Surfactants: Mixed Control and Shift of Mechanism	66
3.8. Ionic Surfactants: Diffusion-Controlled Model and τ_D	68
3.9. Large Perturbations of Surfactant-Laden Interfaces: Compression and Expansion	68
4. Comparison of Pendant Bubble Data to Dynamic Surface-Tension Models	69
4.1. Diffusion-Controlled Adsorption for Nonionic Surfactants	69
4.2. Diffusion-Controlled Adsorption of Aerosol-OT	72
4.3. Using the τ_D to Sort Surfactants: Which Reduce Surface Tension More Rapidly	73
4.4. Shift of Controlling Mechanism	74
4.5. Using the β^l to Sort Surfactants: Which May Have Shift of Mechanism	75
4.6. Relaxation for a Perturbed Interface	77
5. Methods for Measuring Dynamic Surface Tension	78
5.1. Surface-Oscillation Techniques	79
5.2. Pendant Bubble/Drop Method	81
5.3. Drop-Weight/Volume Method	87
5.4. Oscillating-Jet Method	88
5.5. Growing-Drop Method	89
5.6. Maximum Bubble-Pressure Method	89
5.7. Wilhelmy Plate/Ring Method	90
5.8. Method of Meniscus at Flat Plate	90
5.9. Inclined-Plane Technique	90
5.10. Falling-Film Method	91
6. Dynamic Surface-Tension Data	91
6.1. Alcohols	91
6.2. The Polyethoxylated Surfactants: C_mE_n	94
6.3. Triton-X Series	98
6.4. Other Surfactants	98
7. Conclusions	98
Nomenclature	98
Appendix A. Derivation for Equation (3.5)	100
Appendix B. Find the Initial Guesses of Four Parameters (X_0 , Z_0 , B , R_0) for the Newton-Raphson Procedure	102
References	103

Chapter 3. APPLICATION OF PHOTOELECTRON SPECTROSCOPY IN INORGANIC AND ORGANIC MATERIAL SYSTEMS

Sudipta Seal, Tery L. Barr

1. Introduction	108
2. Fundamentals and a Brief History of ESCA	108
3. A Basic ESCA System	108
4. Information Available from ESCA	109
5. Binding Energy and Chemical Shift	109
5.1. The Initial vs Final State Binding Energy Problem	109
5.2. Fundamentals of Charging Shift	111
5.3. Charge Referencing in ESCA	112
6. Quantification	115
7. Application of ESCA in Oxides	117
7.1. Binding Energy Interpretation of Different Forms of Alumina	117
8. Application of ESCA in Composite Systems	123
8.1. B—N—Ti System	123
8.2. ESCA or XPS Studies of Al—Ti—N Systems and Its Oxidation Behavior	126
9. Key Silicate Analyses Using ESCA	130
9.1. General Comments	130
9.2. Structures Containing a Single Type of Aluminum	131

9.3. Aluminosilicates	131
9.4. Mixed Structures	132
10. ESCA in Selected Organic Systems	135
10.1. ESCA Studies of Cell-Silicate Interactions	135
10.2. Key Examples in Polymers	137
10.3. ESCA Studies of Selected Biological Systems	140
11. Conclusion	143
Acknowledgments	143
References	143

Chapter 4. SPECTROSCOPIC CHARACTERIZATION OF OXIDE/OXIDE INTERFACES

Agustín R. González-Elipe, Francisco Yubero

1. Introduction	147
2. Surface-Spectroscopic Methods	149
2.1. Photoemission and XAS Spectroscopies	149
2.2. Electron Energy-Loss Spectroscopies	151
2.3. Ion-Scattering Spectroscopies	151
3. The Auger Parameter Concept in XPS for the Investigation of Metal Oxides	152
4. Photoelectron Spectroscopy Investigations of Mixed Oxides	154
4.1. Basic Tendencies by UPS and XPS	155
4.2. The Auger Parameter to Study Mixed Oxides	155
4.3. The Oxygen Auger Spectra and the Covalence of Oxide Materials	156
4.4. X-Ray Photoelectron Spectroscopy Studies of Aluminosilicate Compounds	157
4.5. Chemical State Plots	158
5. Chemical Characterization of MO/M'O Interfaces	158
5.1. The Auger Parameter for the Analysis of MO/M'O Interfaces	159
5.2. Substrate Effects at MO/M'O Interfaces and Chemical State Plots	167
5.3. Other Electron Spectroscopies for the Characterization of MO/M'O Interfaces	169
5.4. Quantum Mechanical Models	175
6. Microstructure and Reactivity at MO/M'O Interfaces	176
6.1. Thermodynamic Considerations	177
6.2. Growth Mechanisms	178
6.3. Ordered Structures at MO/M'O Interfaces	178
6.4. Wetting at MO/M'O Interfaces	183
6.5. Chemical Reactions at MO/M'O Interfaces	189
References	191

Chapter 5. HIGH-PRESSURE SURFACE SCIENCE

Vladislav Domnich, Yury Gogotsi

1. Introduction	195
1.1. Use of Indentation/Raman Tests as a Tool for High-Pressure Surface Studies	196
2. Phase Transformations in Materials Under Static Contact Loading	197
2.1. Analytical Modeling	197
2.2. Depth-Sensing Indentation	199
2.3. Raman Tensometry	200
2.4. Elemental Semiconductors	200
2.5. Compound Semiconductors	213
2.6. Diamond	217
2.7. Ceramics	220
3. Phase Transformations in Materials Under Dynamic Contact Loading	227
3.1. Scratching and Ultraprecision Cutting	227
3.2. Machining	230
4. Conclusions	233
Acknowledgments	234
References	234

Chapter 6. PHOTOELECTRON SPECTROSCOPY AND SCANNING PROBE MICROSCOPY OF PHTHALOCYANINES ON SILICON

S. Santucci, L. Lozzi, L. Ottaviano

1. Introduction	239
2. Methods of Deposition of Phthalocyanine Thin Films	241
3. Interaction of Thin Films and Surfaces	242
3.1. X-Ray Spectroscopy	242
3.2. Scanning Tunneling Microscopy/Atomic Force Microscopy	255
References	273

Chapter 7. PHOTONIC AND ELECTRONIC SPECTROSCOPIES FOR THE CHARACTERIZATION OF ORGANIC SURFACES AND ORGANIC MOLECULES ADSORBED ON SURFACES

Ana Maria Botelho do Rego, Luis Filipe Vieira Ferreira

1. Introduction	275
2. Diffuse Reflectance Techniques for Surface Photochemistry Studies	276
2.1. Ground-State Diffuse Reflectance Absorption Spectra (UV-Vis-NIR)	276
2.2. Time Resolved Laser Induced Luminescence	277
2.3. Diffuse Reflectance Laser Flash-Photolysis	278
2.4. Other Techniques for Surface Studies	280
3. Electronic Spectroscopies	280
3.1. X-Ray Photoelectron Spectroscopy	280
3.2. High Resolution Electron Energy Loss Spectroscopy	285
4. Examples of Systems Studied by Electronic and Photonic Spectroscopies	286
4.1. Microporous Solid Surfaces and Finely Divided Powders	286
4.2. Flat Surfaces. HREELS and XPS Studies on Organic Films	296
5. Combined Studies Involving Photonic and Electronic Spectroscopies	301
5.1. Rhodamine Dye Covalently Bound to Microcrystalline Cellulose	301
5.2. 2,2'-Cyanines Adsorbed onto Microcrystalline Cellulose	303
5.3. Inclusion Complexes of β -Cyclodextrin and Cyanine Dyes	305
5.4. Sulforhodamine 101 and Rhodamine 6G Adsorbed on Different Pore Size Silicas	307
6. Conclusions	310
Acknowledgments	310
References	310

Chapter 8. HYDROGEN CHEMISTRY ON DIAMOND SURFACES: ADSORPTION, DESORPTION, AND VIBRATIONAL SPECTROSCOPY

Chaochin Su, Huan-Cheng Chang, Juen-Kai Wang, Jiing-Chyuan Lin

1. Introduction	316
2. Preparation of Smooth and Well-Ordered Diamond Surfaces	316
3. Hydrogen Chemisorption on Diamond Surfaces	317
3.1. LEED Study	317
3.2. Vibrational Spectroscopy	324
3.3. Helium Scattering Study	333
3.4. STM/AFM Study	334
3.5. Other Techniques	335
4. Hydrogen Desorption from Diamond Surfaces	337
4.1. Desorption Kinetics	337
4.2. Transformation of a C(111) Surface upon Hydrogen Desorption	342
4.3. Hydrogen Abstraction	343
5. Hydrogen Etching Anisotropy on Diamond Surfaces	345
6. Vibrational Dynamics	346
6.1. Relaxation	347
6.2. Dephasing	348
6.3. Comparison with Si and Ge Surfaces	350
7. Identification of Diamond Nanocrystals in Space	351

Acknowledgments	353
References	353

Chapter 9. MAGNETISM AT SURFACES AND INTERFACES

C. Binns

1. Introduction	357
2. Solid-State Magnetism	358
2.1. Spin Polarization	358
2.2. Orbital Magnetic Moment	360
2.3. Magneto-Crystalline Anisotropy	360
2.4. Shape Anisotropy	361
2.5. Magneto-Elastic Anisotropy	361
2.6. Domains	361
3. Magnetic Behavior at Surfaces, at Interfaces, and in Nanostructures	362
3.1. Enhanced Spin Moments	362
3.2. Enhanced Orbital Moments	362
3.3. Anisotropy	364
3.4. Magneto-Elastic Anisotropy in Ultrathin Films	365
3.5. Domains in Ultrathin Films	366
3.6. <i>4d</i> and <i>5d</i> Magnetism	368
4. Experimental Methods for Determining Magnetism at Surfaces and Interfaces	368
4.1. Techniques for Measuring the Spatially Averaged Magnetization	368
4.2. Spatially Resolved Techniques	373
5. Magnetism in Exposed Surfaces	376
5.1. <i>3d</i> Ferromagnetic Elements	376
5.2. <i>3d</i> Paramagnetic and Antiferromagnetic Elements	378
5.3. <i>4d</i> and <i>5d</i> Elements	379
5.4. Rare Earths	379
6. Magnetism in Ultrathin Films	379
6.1. Ultrathin Films of <i>3d</i> Elements on Nonmagnetic Substrates	379
6.2. <i>3d</i> Paramagnetic and Antiferromagnetic Elements	384
6.3. <i>3d</i> Magnetic Elements on Magnetic Substrates	386
6.4. <i>4d</i> and <i>5d</i> Elements	386
7. Magnetism in Sandwiches and Superlattices	388
7.1. Exchange Coupling through a Nonmagnetic Spacer Layer	388
7.2. Magnetic Moments in Multilayers and Sandwiches	389
References	390

Chapter 10. VISUALIZATION OF POLYMERS AT SURFACES AND INTERFACES WITH ATOMIC FORCE MICROSCOPY

Sergei Magonov

1. Introduction	393
2. Atomic Force Microscopy Imaging of Polymers	397
2.1. Instrumentation and Sample Preparation	398
2.2. Tapping Mode and Force Control	402
2.3. Precise Imaging of Sample Topography and Individual Macromolecules	404
2.4. Compositional Imaging of Heterogeneous Polymer Systems	405
2.5. Imaging of Subsurface Structures	408
3. Visualization of Macromolecules and Their Self-Assemblies on Different Substrates	409
3.1. Imaging of Organic Layers with Scanning Tunneling Microscopy	409
3.2. Organization of Polymers with Minidendritic Blocks	410
3.3. Architecture of Thin Layers of Liquid Crystalline Carbosilane Dendrimers	412
4. Morphology and Nanostructure of Crystalline Polymers	415
4.1. Single Polymer Crystals	416
4.2. Lamellae, Fibrils, and Grains	418
4.3. Structures on Surface and in Bulk	420
5. Surfaces and Interfaces in Heterogeneous Polymer Systems	423
5.1. Block Copolymers	423

5.2. Polymer Blends	425
5.3. Microlayer Systems	427
6. Conclusions	428
Acknowledgments	429
References	429

Chapter 11. DYNAMICS OF CONFINED POLYMERS

Björn Åkerman

1. Introduction	432
2. Scope	432
3. Principles of Confinement	433
3.1. Interactions in Confining Structures	433
3.2. Modes of (Steric) Confinement	433
3.3. Degree of Confinement	434
3.4. The Nature of Confinement in Gels and Porous Glasses—Reptation and Entropic Trapping	436
4. Experimental Systems—the Polymer	437
5. Experimental Systems—the Pore	438
5.1. Cylinder-Like Confinement	438
5.2. Slitlike Confinement	439
5.3. Three-Dimensional Porous Structures	440
6. The Pore Environment	443
6.1. Water Properties	443
6.2. Ion Distribution	444
7. Experimental Methods	444
7.1. Transport Rates	444
7.2. Conformational Dynamics	446
8. Diffusion of Weakly Confined Polymers	446
8.1. Theory	446
8.2. Experiments	448
9. Diffusion of Intermediately and Strongly Confined Polymers	450
9.1. Theory	450
9.2. Experiments	455
10. Electrophoretic Transport of Confined Polymers	460
10.1. Gels	460
10.2. Biological Pores	462
10.3. Lithographic Structures	465
11. Rheological Behavior of Confined Polymers	467
11.1. Chromatography	467
11.2. Viscosity of Confined Polymers	468
11.3. Combined Flow and Electric Fields	470
12. Polymer Topology	471
12.1. Ring-Shaped Polymers	471
12.2. Star-Shaped and Branched Polymers	472
12.3. Knotted Polymers	473
13. Affinity Effects	473
14. Symbols and Abbreviations	474
References	475

Chapter 12. TEXTURAL AND SURFACE CHEMISTRY CHARACTERIZATION OF ZEOLITES VIA ADSORPTION PHENOMENA

João Pires

1. Introduction	481
2. Materials	482
3. Relevant Aspects of the Adsorption of Gases and Vapors in the Characterization of Zeolites and Related Materials	484
3.1. General Definitions	484

3.2. Differential Heats and Entropies of Adsorption	486
3.3. Methods and Models to Analyze Gas–Solid Adsorption Isotherms of Zeolites and Related Materials	488
4. Adsorption Studies of Different Probe Molecules	493
4.1. Introduction	493
4.2. Nitrogen	494
4.3. Carbon Dioxide	498
4.4. Other Gases	500
4.5. Water	501
4.6. Hydrocarbons	502
5. Conclusion	504
Acknowledgments	504
References	504

Chapter 13. DIELECTRIC METHODS OF RESEARCH ON ZEOLITES AND RELATED MATERIALS

Rolando Roque-Malherbe

1. Introduction	510
2. Analyzed Materials	510
2.1. Natural Zeolites	511
2.2. Synthetic Zeolites	511
2.3. Dithionates	512
2.4. Bentonites	512
3. Dielectric Methods of Analysis	513
3.1. Thermodielectric Analyzer	513
3.2. Dielectric Spectrometer	514
4. Interpretation of the Thermodielectric Profiles	514
4.1. The First Effect in Thermodielectric Analysis: 30–250°C	514
4.2. The Second Effect in Thermodielectric Analysis: 150–500°C	517
4.3. The Third Effect in Thermodielectric Analysis: 400–1000°C	517
5. Analytic Application of Dielectric Absorption Spectra	519
6. Application of Thermodielectric Analysis to Dithionates	520
7. Application of Thermodielectric Analysis to Bentonites	520
8. Application of Thermodielectric Analysis to the Study of Hydrothermal Phase Transformation in Zeolites	521
9. Application of Thermodielectric Analysis to Tribochemistry	521
10. Application of Thermodielectric Analysis to the Study of Water Adsorption in Natural Zeolites	522
11. Final Remarks	523
Appendix A. Natural and Synthetic Zeolites	523
Appendix B. Some Definitions	524
Appendix C. Characterization of Zeolites by Adsorption Methods	524
C.1. Osmotic and Dubinin Adsorption Isotherm Equations	525
C.2. Adsorption Characterization of the Zeolite Primary Porosity	525
Appendix D. Zeolite Modification	526
D.1. Modification by Ionic Exchange	526
D.2. Modification by Acid Leaching	526
Appendix E. Synthesis and Characterization of a FAPO-5 Molecular Sieve	527
E.1. Synthesis	527
E.2. Characterization	527
Appendix F. Ionic Exchange	528
F.1. Complete Ionic Exchange	528
F.2. Generalities about Ionic Exchange	528
F.3. Steps of the Ion Exchange Process in Zeolites	528
F.4. Mobility of Cations in Natural Zeolites	529
Acknowledgments	529
References	529

**Chapter 14. SECONDARY ELECTRON FINE STRUCTURE—A METHOD
OF LOCAL ATOMIC STRUCTURE CHARACTERIZATION**

Yu. V. Ruts, D. E. Guy, D. V. Surnin, V. I. Grebennikov

1. Introduction	533
1.1. The History of SEFS: Experimental Results and Theoretical Approaches	535
1.2. Mechanisms of the SEFS Signal Formation	536
1.3. Analysis of the Local Atomic Structure of Surface Layers from SEFS Experimental Data	537
1.4. Characteristic Features of SEFS; Advantages and Disadvantages	538
2. The Method of Obtaining the SEFS Experimental Data	539
2.1. Extraction of the Oscillating Part of the Secondary Electron Spectrum (Mathematical Pretreatment)	540
3. Theoretical Description of the SEFS Process	540
3.1. Emission from the Core Level: The First-Order Process	541
3.2. Emission of the Secondary Electrons from the Valence Band	543
3.3. The SEFS Formula	545
4. Estimation of Amplitudes and Intensities of First- and Second-Order Processes	548
4.1. Atomic Electron Emission from a Core Level: The First-Order Process	548
4.2. Atomic Emission of Secondary Electrons from the Valence State	551
5. Description of the Characteristic Features of the SEFS Spectra of the Secondary Electrons	554
5.1. Temperature Dependence of the SEFS Spectrum	555
5.2. SEFS above the High-Energy CVV Auger Lines	557
6. Analysis of the Surface Local Atomic Structure by the SEFS Method	559
6.1. Formalism of the Inverse Problem in the SEFS Method	560
6.2. Methods of Solving the Inverse Problem	560
6.3. Determination of Parameters of the Local Atomic Structure of Fe, Ni, and Cu Thin Surface Layers from the MVV SEFS Experimental Data	563
6.4. Results and Discussion	565
7. Conclusion	566
Acknowledgments	567
References	567
Index	569
