Evidence-Based Addiction Treatment
Evidence-Based Addiction Treatment

Edited by
Peter M. Miller
Contents

Preface xi
Contributors xv

Part 1 • Introduction to Evidence-Based Practices 1
CHAPTER 1 What Is Evidence-Based Treatment? 3
James L. Sorensen, Jennifer E. Hettema and Sandra Larios
Summary points 3
What does "evidence based" mean? 5
Evaluating the evidence 6
Examples of key studies and findings 11
Examples of evidence-based treatments 14
Conclusions and future directions 17
References 18

CHAPTER 2 The Clinical Course of Addiction Treatment: The Role of Nonspecific Therapeutic Factors 21
T. Cameron Wild and Jody Wolfe
Summary points 21
Introduction 22
Accessing treatment 25
Treatment engagement and outcomes 29
Conclusions 36
References 36

Part 2 • Clinical Assessment and Treatment Monitoring 47
CHAPTER 3 History and Current Substance Use 49
Stephen A. Maisto and Marketa Krenek
Summary points 49
Self-report/interview methods of alcohol and other drug consumption 52
Biomarker measures of alcohol and illicit drug consumption 67
General summary and conclusions 72
References 73

CHAPTER 4 Dependence and Diagnosis 77
Scott H. Stewart
Summary points 77
Introduction 78
Defining substance use disorders 78
Screening methods 82
Diagnostic assessment 84
Summary 86
References 86

CHAPTER 5 Assessment of Co-occurring Addictive and Other Mental Disorders 89
David J. Kavanagh and Jennifer M. Connolly
Summary points 89
Definitions 90

4/18/2009 10:24:26 AM
CHAPTER 6  Individualized Problem Assessment I: Assessing Cognitive and Behavioral Factors
Laura J. Holt, Linda S. Kranitz and Ned L. Cooney
Summary points
Antecedents to substance use and/or relapse
Self-efficacy
Expectancies
Motivation
Assessment of craving
Summary
References

CHAPTER 7  Individualized Problem Assessment II: Assessing Clients from a Broader Perspective
Linda S. Kranitz, Laura J. Holt and Ned L. Cooney
Summary points
Coping skills
Consequences
Social support
Treatment-related needs and preferences
Alcoholics anonymous involvement
Spirituality and religiosity
Multidimensional measures
Summary
References

Part 3  Treatment Methods
CHAPTER 8  Cognitive Behavioral Treatments for Substance Use Disorders
Danielle Barry and Nancy M. Petry
Summary points
Summary
Review of behavioral therapy and cognitive therapy
Cognitive behavioral therapy for substance use disorders
General format of CBT for substance use disorders
Evidence for efficacy of CBT for substance use disorders
Summary
References

CHAPTER 9  Motivational Interviewing for Addictions
Lisa H. Glynn and Theresa B. Moyers
Summary points
Introduction: The counselor's dilemma
What is motivational interviewing?
Four principles of motivational interviewing: "Common ingredients"
Client language: A unique ingredient in MI
The spirit of motivational interviewing
Revisiting the initial consultation
The transtheoretical model of change
Common misconceptions about motivational interviewing
Does motivational interviewing work?
Training and evaluating motivational interviewing

### Chapter 10: Brief Intervention

- **Summary points** | 189
- **Introduction** | 190
- **Background** | 190
- **Origins and theory base** | 191
- **The evidence base** | 193
- **Delivering screening and brief intervention in primary care settings** | 197
- **Implementation issues** | 202
- **Conclusion** | 208
- **References** | 208

### Chapter 11: Relapse Prevention: Evidence Base and Future Directions

- **Summary points** | 215
- **Background of relapse prevention** | 216
- **Theoretical models behind relapse prevention** | 218
- **Empirical evidence supporting relapse prevention** | 220
- **Therapeutic components of relapse prevention interventions** | 221
- **Specific intervention strategies** | 222
- **Global intervention strategies** | 226
- **Summary and conclusions** | 230
- **References** | 230

### Chapter 12: Behavioral Couples Therapy in the Treatment of Alcohol Problems

- **Summary points** | 233
- **Introduction to alcohol behavioral couples therapy** | 234
- **How well does ABCT work?** | 240
- **Some criticisms of the ABCT approach** | 241
- **Expanding ABCT to fit innovations in EFT** | 243
- **Conclusions** | 245
- **Acknowledgment** | 245
- **References** | 245

### Chapter 13: Contingency Management and the Community Reinforcement Approach

- **Summary points** | 249
- **Introduction** | 250
- **Conceptualizing treatment** | 251
- **Community reinforcement approach** | 252
- **Contingency management** | 253
- **Empirical support** | 254
- **Initial study** | 254
- **Extending CRA to treatment of patients with cocaine and opioid use disorders** | 255
- **Further extensions** | 256
- **Conclusions** | 262
Acknowledgment 263

CHAPTER 14  How Much Treatment Does a Person Need?
Self-Change and the Treatment System 267
Harald Klingemann and Justyna Klingemann
Summary points 267
Professional help and lay help—treatment systems in crisis 268
Self-organized quitting, self-change from addictive behaviors 270
Creating a societal climate friendly to individual change: Advice for policy makers 281
References 282

CHAPTER 15  Adjunctive Pharmacotherapy in the Treatment of Alcohol and Drug Dependence 287
Robert Swift and Lorenzo Leggio
Introduction 287
The neurobiology of addictions 288
Pharmacotherapy of addictions 291
Pharmacotherapy as an "adjunctive" therapy 302
Conclusions 304
References 304

Part 4  Special Populations and Applications
CHAPTER 16  Addiction Treatment Disparities: Ethnic and Sexual Minority Populations 313
Arthur W. Blume, Michelle R. Resor and Anthony V. Kantin
Summary points 313
Addiction treatment disparities 315
Conditions that create disparities 316
Assessment issues 317
Treatment issues 317
Difference in cultural values may impact treatment outcomes 318
Prejudice, racism, and homophobia 318
Empirically based treatment and minority clients 319
Summary 320
References 320

CHAPTER 17  Treating the Patient with Comorbidity 327
Morten Hesse
Summary points 327
Empirically supported treatment and comorbidity 328
Is psychiatric comorbidity an indicator of poor prognosis? 328
What happens over time with comorbid symptoms? 330
Treatment of comorbid mental illness and substance abuse 331
References 339

CHAPTER 18  Evidence-Based Interventions for Adolescent Substance Users 345
Josephine M. Hawke and Yifrath Kaminer
Summary points 345
Introduction 346
Systematic reviews and meta-analyses 346
Interventions 348
Where do we go from here 354

</tbody>
</table>
The addictions treatment field is undergoing a period of increased scrutiny, upheaval, and change [McLellan, Carise, & Kleber, 2003]. The growing emphasis on treatment accountability and cost-effectiveness is leading to major changes in standards of care. Inconsistent practices based on clinical experience and intuition rather than hard scientific evidence of treatment efficacy are rapidly becoming unacceptable. Consumers, administrators, and legislators are increasingly unwilling to support treatments for which there is little or no empirical support.

Evidence-based treatments are interventions that show consistent scientific evidence for positive therapeutic outcomes. It seems self-evident that, as is true in medical practice, interventions that have demonstrated their effectiveness through rigorous scientific investigation would be the treatments of choice by practitioners. Unfortunately, in the field of substance abuse treatment, this has not been the case. Substance abuse clinicians are only recently beginning to be exposed to efforts aimed at the translation of addictions science into practice [Miller & Kavanagh, 2007].

Translating science-based treatments into clinical settings is an important priority in the addictions field and has been the subject of an influential Institute of Medicine report [Lamb, Greenlick, & McCarty, 1998]. The report estimated that, historically, it has taken approximately 17 years for science-based therapeutic interventions to be implemented in substance abuse treatment programs. This disquieting fact prompted substantial responses from several federal agencies. Such programs as the Center for Substance Abuse Treatment’s Addiction Technology Transfer Centers and its Practice Research Collaboratives, the National Institute on Alcohol Abuse and Alcoholism’s Research-to-Practice Forums and its Researcher-in-Residence Program, and the National Institute on Drug Abuse’s (NIDA) Clinical Trials Network were established to address this problem.

To further expedite this process, treatment programs in the United States are being mandated to provide evidence-based therapies, with funding and insurance reimbursement being contingent on their doing so. In addition, in 2001, NIDA, in collaboration with the Addiction Technology Transfer Center of the Substance Abuse and Mental Health Services Administration (Center for Substance Abuse Treatment),
launched the Blending Initiative, designed to improve the development, effectiveness, and utility of evidence-based practices (Condon, Miner, Balmer, & Pintello, 2008). It is hoped that these noteworthy efforts will speed up the process of adoption and implementation.

In the meantime, the push is on for future and current clinicians to learn science-based treatments and begin the process of putting them into routine clinical practice. To that end, this textbook provides a state-of-the-art compilation of evidence-based assessment and treatment practices in the treatment of addictions. While research on treatment effectiveness is still ongoing, a substantial body of evidence is available to provide students, academics, and clinicians with specific science-based practices that work.

**APPROACH**

This book is written at a level appropriate for graduate students, upper-level undergraduate students, and students enrolled in courses preparing them for licensure or certification in alcohol and drug counseling. In addition, the book also provides practicing counselors with a much-needed, up-to-date resource on evidence-based assessment and treatment methods. While research studies are discussed in the chapters, a highly sophisticated knowledge of research methodology is not required.

The chapters provide a timely resource for evidence-based practice just when such methods are being required and monitored in addiction treatment centers. While the theoretical basis of treatment methods will be addressed, this coverage will be relatively brief, with emphasis on descriptions of methods (along with case examples) and evidence of efficacy and effectiveness (with emphasis on controlled clinical trials and meta-analyses).

Chapters are authored by well-recognized authorities in the field of substance abuse treatment. Authors demonstrate the rare quality of being top behavioral scientists that conduct and publish treatment research as well as being dedicated, experienced, and caring clinicians.

**TEXT ORGANIZATION**

The book’s 23 chapters are divided into six major sections. In Section 1, two chapters provide an introduction to an evidence-based approach to treatment and an overview of nonspecific factors influencing the therapeutic process with addicted individuals. Section 2 includes chapters focusing on clinical assessment of alcohol and substance use patterns (both currently and historically), diagnosis and dependence, psychiatric comorbidities frequently associated with addiction, and cognitive,
behavioral, and lifestyle problems that are closely related to chemical dependency. In addition, these assessment methods are equally useful in objectively monitoring treatment progress and outcome.

Section 3 consists of chapters describing current major evidence-based treatments for addictive behaviors, including cognitive–behavioral therapy, motivational interviewing, brief intervention, relapse prevention, behavioral couples‘ therapy, contingency management and the community reinforcement approach, self-change, and adjunctive pharmacotherapy. In Section 4, chapters address special populations and special applications of evidence-based approaches, including ethnic and minority populations, clients with psychiatric comorbidities, adolescents, college students, and Internet-based treatments. The chapters in Section 5 discuss evidence-based treatment in action both with the individual client and on a clinical organizational level. Finally, Section 6 consists of a chapter on challenges posed by evidence-based treatments and their implementation in clinical practice.

A FINAL WORD

This volume is designed to provide both the student and the practicing clinician with a basic knowledge and understanding of current major evidence-based assessment and treatment methods. While the goal is to educate students and health professionals in the latest practice methodologies, the eventual aim is to improve the quality of care for addicted individuals and improve their lives.
