

Elsevier's Standard Reference Styles

The automatic conversion of authors' unstructured references into consistent and correct XML references has been perfected by suppliers over the past decade. However, achieving this result, particularly in regard to punctuation, requires detailed programming. If a standard reference style is not adopted for a book and an unstructured (non-Elsevier standard) style is used, this would require new extensive programming for each new title. This approach proves inefficient, expensive and time consuming, therefore a fixed number of standard styles have been chosen for use in all of our books which are XML-rendered.

Responsibility for the accuracy of bibliographic citations lies entirely with the authors.	
<i>References in the text</i>	<i>Citations in the text:</i> Please ensure that every reference cited in the text is also present in the reference list (and vice versa). Any references cited in the abstract must be given in full. Unpublished results and personal communications should not be in the reference list, but may be mentioned in the text. Citation of a reference as "in press" implies that the item has been accepted for publication.
Web references	<i>Citing and listing of web references.</i> As a minimum, the full URL should be given and the date when the reference was last accessed. Any further information, if known (author names, dates, reference to a source publication, etc.), should also be given. Web references can be listed separately (e.g., after the reference list) under a different heading if desired, or can be included in the reference list.

The following Elsevier standard reference styles are available:

1. **Numbered Style – Standard numbered style**
2. **Harvard style – Name–date style**
3. **Vancouver style – Numbered style**
4. **Embellished Vancouver style – Numbered style**
5. **APA style – Name–date style**
6. **AMA Style – Numbered style**
7. **Saunders style – Name–date style**
8. **Saunders – Numbered style**
9. **ACS – Numbered style**
 - **9a ACS – Superscript numbered style**
 - **9b ACS – Name-date style**

Note: These standard reference styles are **versions developed for Elsevier's needs**, and may differ from the official version. Some of these styles are based on accepted international standards, such as Vancouver and APA (American Psychological Association) styles; others are based on traditional styles that have been in use for many years within specific disciplines.

Examples of the standard styles are as follows:

Numbered style (Style 1):

In-text citations: Indicate references by number(s) in square brackets in line with the text. The actual authors can be referred to, but the reference number(s) must always be given.

Example: “..... as demonstrated [3, 6]. Barnaby and Jones [8] obtained a different result”

Reference list: Number the references (numbers in square brackets) in the list in the order in which they appear in the text.

Name–date (Harvard) style (Style 2):

In-text citations: All citations in the text should refer to:

1. *Single author:* the author's name (without initials, unless there is ambiguity) and the year of publication;
2. *Two authors:* both authors' names and the year of publication;
3. *Three or more authors:* first author's name followed by 'et al.' and the year of publication.

Citations may be made directly (or parenthetically). Groups of references should be listed first alphabetically, then chronologically.

Examples: "as demonstrated (Allan, 2000a, 2000b, 1999; Allan and Jones, 1999). Kramer et al. (2010) have recently shown"

Reference list: References should be arranged first alphabetically and then further sorted chronologically if necessary. More than one reference from the same author(s) in the same year must be identified by the letters 'a', 'b', 'c', etc., placed after the year of publication.

Saunders Style (Style 7):

In-text citations: All citations in the text should refer to:

1. *Single author:* the author's name (without initials, unless there is ambiguity) and the year of publication;
2. *Two authors:* both authors' names and the year of publication;
3. *Three or more authors:* first author's name followed by 'et al.' and the year of publication.

Citations may be made directly (or parenthetically). Groups of references should be listed first alphabetically, then chronologically.

Examples: "as demonstrated (Allan, 2000a, 2000b, 1999; Allan and Jones, 1999). Kramer et al. (2010) have recently shown".

Reference list: References should be arranged first alphabetically and then further sorted chronologically if necessary. More than one reference from the same author(s) in the same year must be identified by the letters 'a', 'b', 'c', etc., placed after the year of publication.

ACS Numbered style (Style 9):

In-text citations:

References in the text should be cited by number. References should be in italics and numbered sequentially. If a reference is cited more than once, it does not receive a new number. If citing more than one reference at a time, include reference numbers in increasing order separated by commas.

Example: ...preparing N-(p-nitroaryl)amides (2).

Reference list: The list of references appears at the end of the paper in numerical order when cited by numbers.

ACS Superscript number style (Style 9a):

In-text citations: References in the text should be cited by number. References should be in superscript and numbered sequentially. The number is placed *after* relevant full stops and commas, and *before* relevant colons and semicolons. If a reference is cited more than once, it does not receive a new number. If citing more than one reference at a time, include reference numbers in increasing order separated by commas.

Example: ...preparing N-(p-nitroaryl)amides².

Reference list: The list of references appears at the end of the paper in numerical order when cited by numbers.

Please see ACS numbered style (Style 9) for the reference list examples.

ACS Name-date style (Style 9b):

In-text citations: References in the text should be cited by author name and date.

Example: ...preparing N-(p-nitroaryl)amides (Stern and Cheng, 1995).

Reference list: The list of references appears at the end of the paper in alphabetical order if cited by author and date.
