**Supplemental File S6. Example output from inverse modeling (S3) with data (S4, S5)**  
Hall, R. O. and E. R. Hotchkiss. Stream Metabolism. In: *Methods in Stream Ecology*, 3<sup>rd</sup> Ed.

---

Here is an example of metabolism model outputs if using inverse modeling with MLE R code provided in S3 and data files S4 and S5 (Spring Creek and French Creek, respectively).

### 1. PLOT: Original O2 data for Spring Creek and French Creek

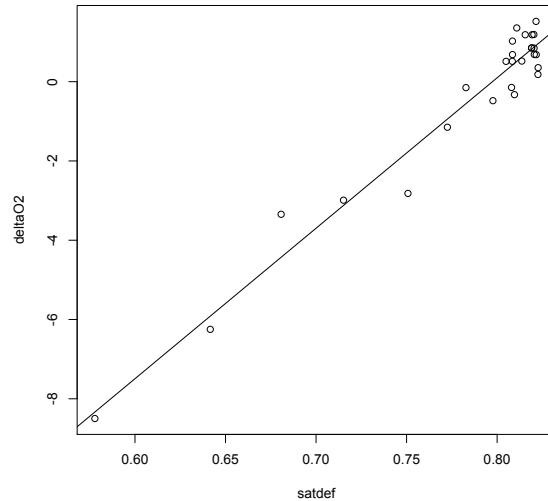

## 2. NIGHTTIME REGRESSION OUTPUT

### Spring Creek

```
[[1]]  
(Intercept) satdef  
-30.26716 37.95651
```

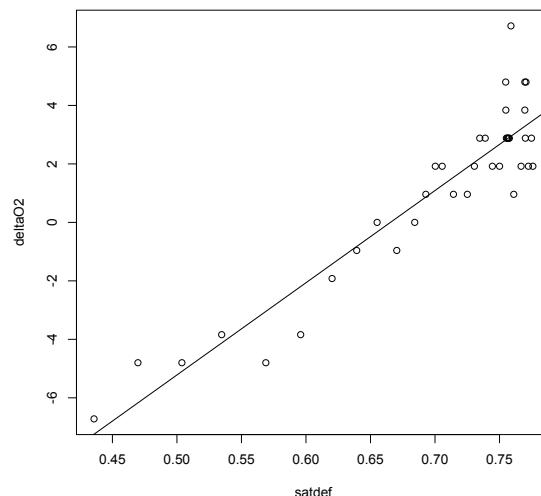

```
[[2]]  
satdef  
52.4837
```

### French Creek 1

```
[[1]]  
(Intercept) satdef  
-20.99013 31.54226
```

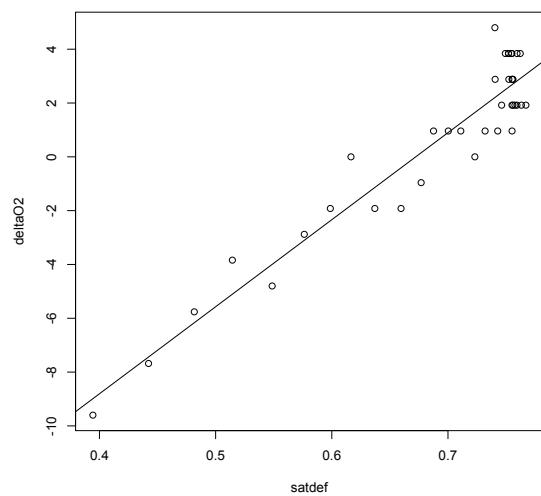

```
[[2]]  
satdef  
42.18804
```

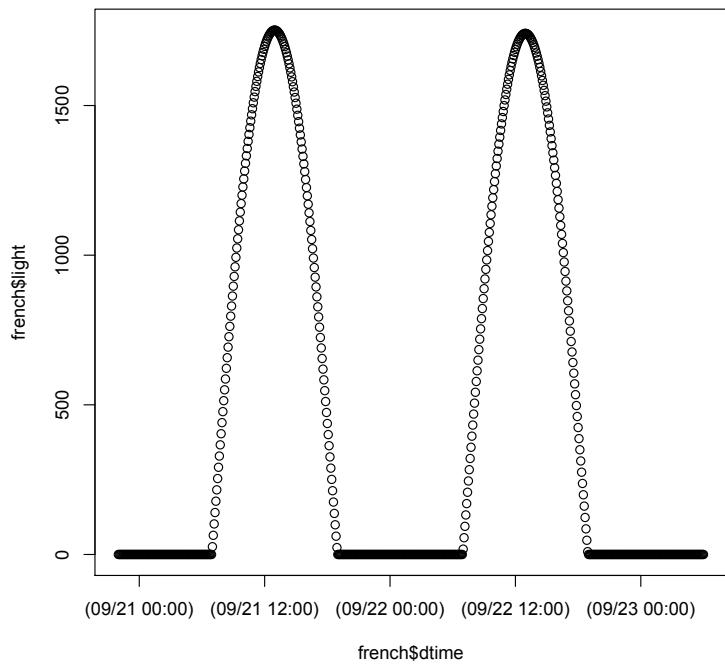

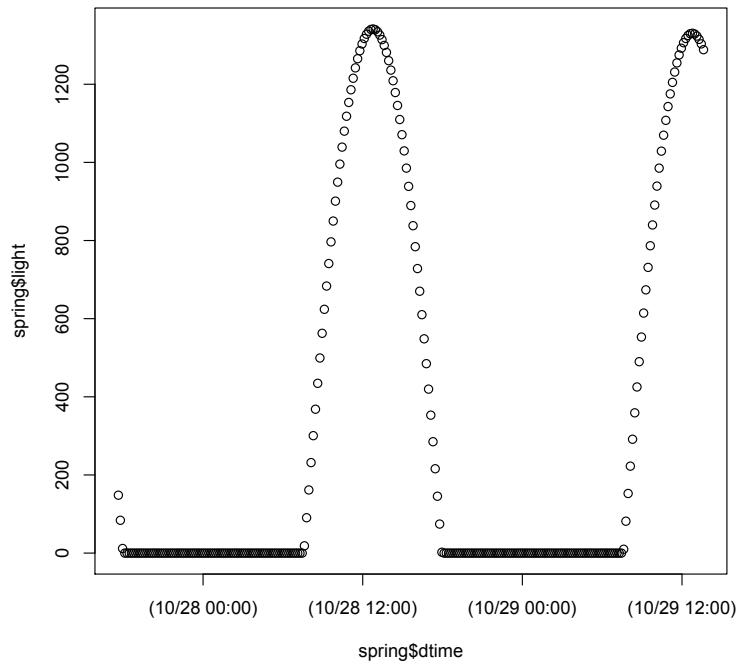

### French Creek 2

```
[[1]]  
(Intercept) satdef  
-21.74394 32.34515
```

```
[[2]]  
satdef  
43.32524
```

### 3. PLOT: Modelled light for Spring Creek and French Creek

#### 4. METABOLISM MODEL OUTPUT; ESTIMATE GPP, ER, & K

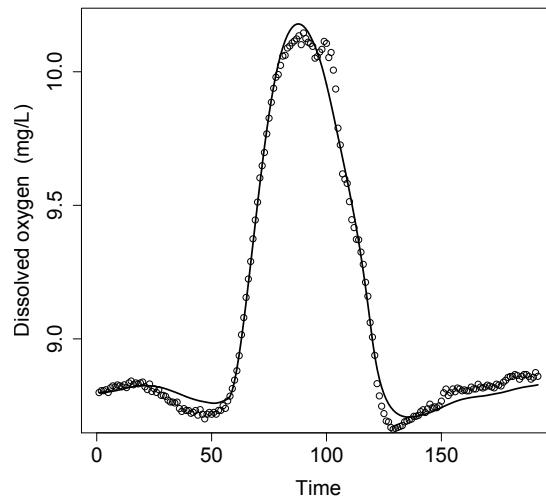

##### Spring Creek

\$GPP  
[1] 1.939175
