# Contents

	Preface to the Sparse Edition .....	<b>xv</b>
	Notations .....	<b>xix</b>
<b>CHAPTER 1</b>	<b>Sparse Representations</b>	<b>1</b>
1.1	Computational Harmonic Analysis .....	1
1.1.1	The Fourier Kingdom .....	2
1.1.2	Wavelet Bases .....	2
1.2	Approximation and Processing in Bases .....	5
1.2.1	Sampling with Linear Approximations .....	7
1.2.2	Sparse Nonlinear Approximations .....	8
1.2.3	Compression .....	11
1.2.4	Denoising .....	11
1.3	Time-Frequency Dictionaries .....	14
1.3.1	Heisenberg Uncertainty .....	15
1.3.2	Windowed Fourier Transform .....	16
1.3.3	Continuous Wavelet Transform .....	17
1.3.4	Time-Frequency Orthonormal Bases .....	19
1.4	Sparsity in Redundant Dictionaries .....	21
1.4.1	Frame Analysis and Synthesis .....	21
1.4.2	Ideal Dictionary Approximations .....	23
1.4.3	Pursuit in Dictionaries .....	24
1.5	Inverse Problems .....	26
1.5.1	Diagonal Inverse Estimation .....	27
1.5.2	Super-resolution and Compressive Sensing .....	28
1.6	Travel Guide .....	30
1.6.1	Reproducible Computational Science .....	30
1.6.2	Book Road Map .....	30
<b>CHAPTER 2</b>	<b>The Fourier Kingdom</b>	<b>33</b>
2.1	Linear Time-Invariant Filtering .....	33
2.1.1	Impulse Response .....	33
2.1.2	Transfer Functions .....	35
2.2	Fourier Integrals .....	35
2.2.1	Fourier Transform in $L^1(\mathbb{R})$ .....	35
2.2.2	Fourier Transform in $L^2(\mathbb{R})$ .....	38
2.2.3	Examples .....	40
2.3	Properties .....	42
2.3.1	Regularity and Decay .....	42
2.3.2	Uncertainty Principle .....	43

	2.3.3	Total Variation .....	46
2.4		Two-Dimensional Fourier Transform .....	51
2.5		Exercises .....	55
<b>CHAPTER 3</b>		<b>Discrete Revolution</b>	<b>59</b>
3.1		Sampling Analog Signals .....	59
	3.1.1	Shannon-Whittaker Sampling Theorem .....	59
	3.1.2	Aliasing .....	61
	3.1.3	General Sampling and Linear Analog Conversions ..	65
3.2		Discrete Time-Invariant Filters .....	70
	3.2.1	Impulse Response and Transfer Function .....	70
	3.2.2	Fourier Series .....	72
3.3		Finite Signals .....	75
	3.3.1	Circular Convolutions .....	76
	3.3.2	Discrete Fourier Transform .....	76
	3.3.3	Fast Fourier Transform .....	78
	3.3.4	Fast Convolutions .....	79
3.4		Discrete Image Processing .....	80
	3.4.1	Two-Dimensional Sampling Theorems .....	80
	3.4.2	Discrete Image Filtering .....	82
	3.4.3	Circular Convolutions and Fourier Basis .....	83
3.5		Exercises .....	85
<b>CHAPTER 4</b>		<b>Time Meets Frequency</b>	<b>89</b>
4.1		Time-Frequency Atoms .....	89
4.2		Windowed Fourier Transform .....	92
	4.2.1	Completeness and Stability .....	94
	4.2.2	Choice of Window .....	98
	4.2.3	Discrete Windowed Fourier Transform .....	101
4.3		Wavelet Transforms .....	102
	4.3.1	Real Wavelets .....	103
	4.3.2	Analytic Wavelets .....	107
	4.3.3	Discrete Wavelets .....	112
4.4		Time-Frequency Geometry of Instantaneous Frequencies ...	115
	4.4.1	Analytic Instantaneous Frequency .....	115
	4.4.2	Windowed Fourier Ridges .....	118
	4.4.3	Wavelet Ridges .....	129
4.5		Quadratic Time-Frequency Energy .....	134
	4.5.1	Wigner-Ville Distribution .....	136
	4.5.2	Interferences and Positivity .....	140
	4.5.3	Cohen's Class .....	145
	4.5.4	Discrete Wigner-Ville Computations .....	149
4.6		Exercises .....	151

<b>CHAPTER 5</b>	<b>Frames</b>	<b>155</b>
5.1	Frames and Riesz Bases.....	155
5.1.1	Stable Analysis and Synthesis Operators .....	155
5.1.2	Dual Frame and Pseudo Inverse .....	159
5.1.3	Dual-Frame Analysis and Synthesis Computations ...	161
5.1.4	Frame Projector and Reproducing Kernel .....	166
5.1.5	Translation-Invariant Frames .....	168
5.2	Translation-Invariant Dyadic Wavelet Transform .....	170
5.2.1	Dyadic Wavelet Design .....	172
5.2.2	Algorithme à Trous.....	175
5.3	Subsampled Wavelet Frames .....	178
5.4	Windowed Fourier Frames .....	181
5.4.1	Tight Frames .....	183
5.4.2	General Frames .....	184
5.5	Multiscale Directional Frames for Images .....	188
5.5.1	Directional Wavelet Frames .....	189
5.5.2	Curvelet Frames .....	194
5.6	Exercises .....	201
<b>CHAPTER 6</b>	<b>Wavelet Zoom</b>	<b>205</b>
6.1	Lipschitz Regularity .....	205
6.1.1	Lipschitz Definition and Fourier Analysis .....	205
6.1.2	Wavelet Vanishing Moments .....	208
6.1.3	Regularity Measurements with Wavelets .....	211
6.2	Wavelet Transform Modulus Maxima .....	218
6.2.1	Detection of Singularities .....	218
6.2.2	Dyadic Maxima Representation .....	224
6.3	Multiscale Edge Detection .....	230
6.3.1	Wavelet Maxima for Images .....	230
6.3.2	Fast Multiscale Edge Computations .....	239
6.4	Multifractals .....	242
6.4.1	Fractal Sets and Self-Similar Functions .....	242
6.4.2	Singularity Spectrum .....	246
6.4.3	Fractal Noises .....	254
6.5	Exercises .....	259
<b>CHAPTER 7</b>	<b>Wavelet Bases</b>	<b>263</b>
7.1	Orthogonal Wavelet Bases.....	263
7.1.1	Multiresolution Approximations.....	264
7.1.2	Scaling Function .....	267
7.1.3	Conjugate Mirror Filters.....	270
7.1.4	In Which Orthogonal Wavelets Finally Arrive .....	278
7.2	Classes of Wavelet Bases.....	284
7.2.1	Choosing a Wavelet.....	284

	7.2.2	Shannon, Meyer, Haar, and Battle-Lemarié Wavelets .	289
	7.2.3	Daubechies Compactly Supported Wavelets . . . . .	292
7.3		Wavelets and Filter Banks . . . . .	298
	7.3.1	Fast Orthogonal Wavelet Transform . . . . .	298
	7.3.2	Perfect Reconstruction Filter Banks . . . . .	302
	7.3.3	Biorthogonal Bases of $\ell^2(\mathbb{Z})$ . . . . .	306
7.4		Biorthogonal Wavelet Bases . . . . .	308
	7.4.1	Construction of Biorthogonal Wavelet Bases . . . . .	308
	7.4.2	Biorthogonal Wavelet Design . . . . .	311
	7.4.3	Compactly Supported Biorthogonal Wavelets . . . . .	313
7.5		Wavelet Bases on an Interval . . . . .	317
	7.5.1	Periodic Wavelets . . . . .	318
	7.5.2	Folded Wavelets . . . . .	320
	7.5.3	Boundary Wavelets . . . . .	322
7.6		Multiscale Interpolations . . . . .	328
	7.6.1	Interpolation and Sampling Theorems . . . . .	328
	7.6.2	Interpolation Wavelet Basis . . . . .	333
7.7		Separable Wavelet Bases . . . . .	338
	7.7.1	Separable Multiresolutions . . . . .	338
	7.7.2	Two-Dimensional Wavelet Bases . . . . .	340
	7.7.3	Fast Two-Dimensional Wavelet Transform . . . . .	346
	7.7.4	Wavelet Bases in Higher Dimensions . . . . .	348
7.8		Lifting Wavelets . . . . .	350
	7.8.1	Biorthogonal Bases over Nonstationary Grids . . . . .	350
	7.8.2	Lifting Scheme . . . . .	352
	7.8.3	Quincunx Wavelet Bases . . . . .	359
	7.8.4	Wavelets on Bounded Domains and Surfaces . . . . .	361
	7.8.5	Faster Wavelet Transform with Lifting . . . . .	367
7.9		Exercises . . . . .	370
<b>CHAPTER 8</b>		<b>Wavelet Packet and Local Cosine Bases</b>	<b>377</b>
8.1		Wavelet Packets . . . . .	377
	8.1.1	Wavelet Packet Tree . . . . .	377
	8.1.2	Time-Frequency Localization . . . . .	383
	8.1.3	Particular Wavelet Packet Bases . . . . .	388
	8.1.4	Wavelet Packet Filter Banks . . . . .	393
8.2		Image Wavelet Packets . . . . .	395
	8.2.1	Wavelet Packet Quad-Tree . . . . .	395
	8.2.2	Separable Filter Banks . . . . .	399
8.3		Block Transforms . . . . .	400
	8.3.1	Block Bases . . . . .	401
	8.3.2	Cosine Bases . . . . .	403
	8.3.3	Discrete Cosine Bases . . . . .	406
	8.3.4	Fast Discrete Cosine Transforms . . . . .	407

8.4	Lapped Orthogonal Transforms .....	410
8.4.1	Lapped Projectors .....	410
8.4.2	Lapped Orthogonal Bases .....	416
8.4.3	Local Cosine Bases .....	419
8.4.4	Discrete Lapped Transforms .....	422
8.5	Local Cosine Trees .....	426
8.5.1	Binary Tree of Cosine Bases .....	426
8.5.2	Tree of Discrete Bases .....	429
8.5.3	Image Cosine Quad-Tree .....	429
8.6	Exercises .....	432
<b>CHAPTER 9</b>	<b>Approximations in Bases</b> .....	<b>435</b>
9.1	Linear Approximations .....	435
9.1.1	Sampling and Approximation Error .....	435
9.1.2	Linear Fourier Approximations .....	438
9.1.3	Multiresolution Approximation Errors with Wavelets .....	442
9.1.4	Karhunen-Loève Approximations .....	446
9.2	Nonlinear Approximations .....	450
9.2.1	Nonlinear Approximation Error .....	451
9.2.2	Wavelet Adaptive Grids .....	455
9.2.3	Approximations in Besov and Bounded Variation Spaces .....	459
9.3	Sparse Image Representations .....	463
9.3.1	Wavelet Image Approximations .....	464
9.3.2	Geometric Image Models and Adaptive Triangulations .....	471
9.3.3	Curvelet Approximations .....	476
9.4	Exercises .....	478
<b>CHAPTER 10</b>	<b>Compression</b> .....	<b>481</b>
10.1	Transform Coding .....	481
10.1.1	Compression State of the Art .....	482
10.1.2	Compression in Orthonormal Bases .....	483
10.2	Distortion Rate of Quantization .....	485
10.2.1	Entropy Coding .....	485
10.2.2	Scalar Quantization .....	493
10.3	High Bit Rate Compression .....	496
10.3.1	Bit Allocation .....	496
10.3.2	Optimal Basis and Karhunen-Loève .....	498
10.3.3	Transparent Audio Code .....	501
10.4	Sparse Signal Compression .....	506
10.4.1	Distortion Rate and Wavelet Image Coding .....	506
10.4.2	Embedded Transform Coding .....	516

10.5	Image-Compression Standards .....	519
10.5.1	JPEG Block Cosine Coding .....	519
10.5.2	JPEG-2000 Wavelet Coding .....	523
10.6	Exercises .....	531
<b>CHAPTER 11</b>	<b>Denoising</b> .....	<b>535</b>
11.1	Estimation with Additive Noise .....	535
11.1.1	Bayes Estimation .....	536
11.1.2	Minimax Estimation .....	544
11.2	Diagonal Estimation in a Basis .....	548
11.2.1	Diagonal Estimation with Oracles .....	548
11.2.2	Thresholding Estimation .....	552
11.2.3	Thresholding Improvements .....	558
11.3	Thresholding Sparse Representations .....	562
11.3.1	Wavelet Thresholding .....	563
11.3.2	Wavelet and Curvelet Image Denoising .....	568
11.3.3	Audio Denoising by Time-Frequency Thresholding ..	571
11.4	Nondiagonal Block Thresholding .....	575
11.4.1	Block Thresholding in Bases and Frames .....	575
11.4.2	Wavelet Block Thresholding .....	581
11.4.3	Time-Frequency Audio Block Thresholding .....	582
11.5	Denoising Minimax Optimality .....	585
11.5.1	Linear Diagonal Minimax Estimation .....	587
11.5.2	Thresholding Optimality over Orthosymmetric Sets .....	590
11.5.3	Nearly Minimax with Wavelet Estimation .....	595
11.6	Exercises .....	606
<b>CHAPTER 12</b>	<b>Sparsity in Redundant Dictionaries</b> .....	<b>611</b>
12.1	Ideal Sparse Processing in Dictionaries .....	611
12.1.1	Best $M$ -Term Approximations .....	612
12.1.2	Compression by Support Coding .....	614
12.1.3	Denoising by Support Selection in a Dictionary ....	616
12.2	Dictionaries of Orthonormal Bases .....	621
12.2.1	Approximation, Compression, and Denoising in a Best Basis .....	622
12.2.2	Fast Best-Basis Search in Tree Dictionaries .....	623
12.2.3	Wavelet Packet and Local Cosine Best Bases .....	626
12.2.4	Bandlets for Geometric Image Regularity .....	631
12.3	Greedy Matching Pursuits .....	642
12.3.1	Matching Pursuit .....	642
12.3.2	Orthogonal Matching Pursuit .....	648
12.3.3	Gabor Dictionaries .....	650
12.3.4	Coherent Matching Pursuit Denoising .....	655

12.4	$l^1$ Pursuits .....	659
12.4.1	Basis Pursuit .....	659
12.4.2	$l^1$ Lagrangian Pursuit .....	664
12.4.3	Computations of $l^1$ Minimizations.....	668
12.4.4	Sparse Synthesis versus Analysis and Total Variation Regularization .....	673
12.5	Pursuit Recovery .....	677
12.5.1	Stability and Incoherence .....	677
12.5.2	Support Recovery with Matching Pursuit .....	679
12.5.3	Support Recovery with $l^1$ Pursuits .....	684
12.6	Multichannel Signals.....	688
12.6.1	Approximation and Denoising by Thresholding in Bases.....	689
12.6.2	Multichannel Pursuits .....	690
12.7	Learning Dictionaries .....	693
12.8	Exercises .....	696
<b>CHAPTER 13</b>	<b>Inverse Problems</b> .....	<b>699</b>
13.1	Linear Inverse Estimation .....	700
13.1.1	Quadratic and Tikhonov Regularizations.....	700
13.1.2	Singular Value Decompositions .....	702
13.2	Thresholding Estimators for Inverse Problems .....	703
13.2.1	Thresholding in Bases of Almost Singular Vectors ...	703
13.2.2	Thresholding Deconvolutions .....	709
13.3	Super-resolution .....	713
13.3.1	Sparse Super-resolution Estimation .....	713
13.3.2	Sparse Spike Deconvolution .....	719
13.3.3	Recovery of Missing Data .....	722
13.4	Compressive Sensing.....	728
13.4.1	Incoherence with Random Measurements .....	729
13.4.2	Approximations with Compressive Sensing .....	735
13.4.3	Compressive Sensing Applications .....	742
13.5	Blind Source Separation .....	744
13.5.1	Blind Mixing Matrix Estimation.....	745
13.5.2	Source Separation .....	751
13.6	Exercises .....	752
<b>APPENDIX</b>	<b>Mathematical Complements</b> .....	<b>753</b>
<b>Bibliography</b> .....	<b>765</b>	
<b>Index</b> .....	<b>795</b>	

# Preface to the Sparse Edition

I cannot help but find striking resemblances between scientific communities and schools of fish. We interact in conferences and through articles, and we move together while a global trajectory emerges from individual contributions. Some of us like to be at the center of the school, others prefer to wander around, and a few swim in multiple directions in front. To avoid dying by starvation in a progressively narrower and specialized domain, a scientific community needs also to move on. Computational harmonic analysis is still very much alive because it went beyond wavelets. Writing such a book is about decoding the trajectory of the school and gathering the pearls that have been uncovered on the way. Wavelets are no longer the central topic, despite the previous edition's original title. It is just an important tool, as the Fourier transform is. Sparse representation and processing are now at the core.

In the 1980s, many researchers were focused on building time-frequency decompositions, trying to avoid the uncertainty barrier, and hoping to discover the ultimate representation. Along the way came the construction of wavelet orthogonal bases, which opened new perspectives through collaborations with physicists and mathematicians. Designing orthogonal bases with Xlets became a popular sport with compression and noise-reduction applications. Connections with approximations and sparsity also became more apparent. The search for sparsity has taken over, leading to new grounds where orthonormal bases are replaced by redundant dictionaries of waveforms.

During these last seven years, I also encountered the industrial world. With a lot of naiveness, some bandlets, and more mathematics, I cofounded a start-up with Christophe Bernard, Jérôme Kalifa, and Erwan Le Pennec. It took us some time to learn that in three months good engineering should produce robust algorithms that operate in real time, as opposed to the three years we were used to having for writing new ideas with promising perspectives. Yet, we survived because mathematics is a major source of industrial innovations for signal processing. Semiconductor technology offers amazing computational power and flexibility. However, ad hoc algorithms often do not scale easily and mathematics accelerates the trial-and-error development process. Sparsity decreases computations, memory, and data communications. Although it brings beauty, mathematical understanding is not a luxury. It is required by increasingly sophisticated information-processing devices.

## **New Additions**

Putting sparsity at the center of the book implied rewriting many parts and adding sections. Chapters 12 and 13 are new. They introduce sparse representations in redundant dictionaries, and inverse problems, super-resolution, and

compressive sensing. Here is a small catalog of new elements in this third edition:

- Radon transform and tomography
- Lifting for wavelets on surfaces, bounded domains, and fast computations
- JPEG-2000 image compression
- Block thresholding for denoising
- Geometric representations with adaptive triangulations, curvelets, and bandlets
- Sparse approximations in redundant dictionaries with pursuit algorithms
- Noise reduction with model selection in redundant dictionaries
- Exact recovery of sparse approximation supports in dictionaries
- Multichannel signal representations and processing
- Dictionary learning
- Inverse problems and super-resolution
- Compressive sensing
- Source separation

## Teaching

This book is intended as a graduate-level textbook. Its evolution is also the result of teaching courses in electrical engineering and applied mathematics. A new website provides software for reproducible experimentations, exercise solutions, together with teaching material such as slides with figures and MATLAB software for numerical classes of <http://wavelet-tour.com>.

More exercises have been added at the end of each chapter, ordered by level of difficulty. Level<sup>1</sup> exercises are direct applications of the course. Level<sup>2</sup> exercises requires more thinking. Level<sup>3</sup> includes some technical derivation exercises. Level<sup>4</sup> are projects at the interface of research that are possible topics for a final course project or independent study. More exercises and projects can be found in the website.

## Sparse Course Programs

The Fourier transform and analog-to-digital conversion through linear sampling approximations provide a common ground for all courses (Chapters 2 and 3). It introduces basic signal representations and reviews important mathematical and algorithmic tools needed afterward. Many trajectories are then possible to explore and teach sparse signal processing. The following list notes several topics that can orient a course's structure with elements that can be covered along the way.

## Sparse representations with bases and applications:

- Principles of linear and nonlinear approximations in bases (Chapter 9)
- Lipschitz regularity and wavelet coefficients decay (Chapter 6)
- Wavelet bases (Chapter 7)
- Properties of linear and nonlinear wavelet basis approximations (Chapter 9)
- Image wavelet compression (Chapter 10)
- Linear and nonlinear diagonal denoising (Chapter 11)

## Sparse time-frequency representations:

- Time-frequency wavelet and windowed Fourier ridges for audio processing (Chapter 4)
- Local cosine bases (Chapter 8)
- Linear and nonlinear approximations in bases (Chapter 9)
- Audio compression (Chapter 10)
- Audio denoising and block thresholding (Chapter 11)
- Compression and denoising in redundant time-frequency dictionaries with best bases or pursuit algorithms (Chapter 12)

## Sparse signal estimation:

- Bayes versus minimax and linear versus nonlinear estimations (Chapter 11)
- Wavelet bases (Chapter 7)
- Linear and nonlinear approximations in bases (Chapter 9)
- Thresholding estimation (Chapter 11)
- Minimax optimality (Chapter 11)
- Model selection for denoising in redundant dictionaries (Chapter 12)
- Compressive sensing (Chapter 13)

## Sparse compression and information theory:

- Wavelet orthonormal bases (Chapter 7)
- Linear and nonlinear approximations in bases (Chapter 9)
- Compression and sparse transform codes in bases (Chapter 10)
- Compression in redundant dictionaries (Chapter 12)
- Compressive sensing (Chapter 13)
- Source separation (Chapter 13)

## Dictionary representations and inverse problems:

- Frames and Riesz bases (Chapter 5)
- Linear and nonlinear approximations in bases (Chapter 9)
- Ideal redundant dictionary approximations (Chapter 12)
- Pursuit algorithms and dictionary incoherence (Chapter 12)
- Linear and thresholding inverse estimators (Chapter 13)
- Super-resolution and source separation (Chapter 13)
- Compressive sensing (Chapter 13)

Geometric sparse processing:

- Time-frequency spectral lines and ridges (Chapter 4)
- Frames and Riesz bases (Chapter 5)
- Multiscale edge representations with wavelet maxima (Chapter 6)
- Sparse approximation supports in bases (Chapter 9)
- Approximations with geometric regularity, curvelets, and bandlets (Chapters 9 and 12)
- Sparse signal compression and geometric bit budget (Chapters 10 and 12)
- Exact recovery of sparse approximation supports (Chapter 12)
- Super-resolution (Chapter 13)

---

## ACKNOWLEDGMENTS

Some things do not change with new editions, in particular the traces left by the ones who were, and remain, for me important references. As always, I am deeply grateful to Ruzena Bajcsy and Yves Meyer.

I spent the last few years with three brilliant and kind colleagues—Christophe Bernard, Jérôme Kalifa, and Erwan Le Pennec—in a pressure cooker called a “start-up.” Pressure means stress, despite very good moments. The resulting sauce was a blend of what all of us could provide, which brought new flavors to our personalities. I am thankful to them for the ones I got, some of which I am still discovering.

This new edition is the result of a collaboration with Gabriel Peyré, who made these changes not only possible, but also very interesting to do. I thank him for his remarkable work and help.

*Stéphane Mallat*
