Rendering with mental ray® and 3ds Max
Rendering with mental ray® and 3ds Max

Second Edition

Joep van der Steen
Ted Boardman
Acknowledgments

Joep and I would like to acknowledge Steffen Roemer at Mental Images for keeping us on the straight and narrow technical path in regards to mental ray.

Also, we’d like to thank Chris Simpson and his staff at Focal Press for all the help in turning the pages we generate into a real book. Wrangling one author through the process of producing a book is difficult, but having two authors makes it three times as hard.

Mostly, we thank you, the reader, for having enough confidence in Joep and me to purchase the book.

Dedication

Ted Boardman would like to dedicate this book to Sally Turner for over 30 years of companionship.
## Contents

### Chapter 1: Getting Started with mental ray® in 3ds max

1.1 Introduction

1.2 Getting started
   - 1.2.1 Setting 3ds max and 3ds max Design interface and defaults
     - 1.2.1.1 Switching defaults and user interface
   - 1.2.2 Units in 3ds max
     - 1.2.2.1 Setting display and system units in 3ds max

1.3 Concepts
   - 1.3.1 Global illumination
     - 1.3.1.1 Direct light
     - 1.3.1.2 Bounced light
     - 1.3.1.3 Environment light
     - 1.3.1.4 Shadows
     - 1.3.1.5 Materials and shaders
   - 1.3.2 Final gather
   - 1.3.3 Photons
   - 1.3.4 Exposure control
   - 1.3.5 Ambient occlusion
   - 1.3.6 Gamma correction

1.4 Companion website

### Chapter 2: Rendering with mental ray®

2.1 Introduction

2.1.1 Gamma correction

2.1.2 Indirect illumination
   - 2.1.2.1 Final gather
   - 2.1.2.2 Global illumination

2.1.3 Ambient occlusion

2.1.4 Render presets

2.2 Gamma correction

2.2.1 Enable gamma correction

2.3 Indirect illumination

2.3.1 Final gather—Exterior scene
   - 2.3.1.1 Enabling final gather
   - 2.3.1.2 Render Frame Window
   - 2.3.1.3 Render Preset
Chapter 3: mental ray® and lights

3.1 Introduction

3.2 Standard lights
   3.2.1 Rendering in mental ray with standard lights
      3.2.1.1 Standard lights with shadows
      3.2.1.2 Mixing standard lights and photometric daylight

3.3 Photometric lights
   3.3.1 Target photometric lights
      3.3.1.1 Adding and adjusting photometric lights

3.4 Sky portal
   3.4.1 Channeling daylight with a Sky Portal
      3.4.1.1 Sky Portal
   3.4.2 Sky Portal and scene environment
      3.4.2.1 Sky Portal artifacts

3.5 Daylight system and Physical Sky shader
   3.5.1 Creating a scene using the mr Physical Sky shader
      3.5.1.1 Placing a Daylight system with Physical Sky background
   3.5.2 Haze and clouds
      3.5.2.1 Adjusting the haze in the sky
      3.5.2.2 Using a background image

Chapter 4: mental ray® and materials

4.1 Introduction

4.2 Arch & Design material
   4.2.1 Arch & Design templates
      4.2.1.1 Setting Arch & Design templates
   4.2.2 Controlling reflections
      4.2.2.1 BRDF control of reflections
5.5 Camera shaders
   5.5.1 Mist shader
      5.5.1.1 Applying and adjusting a Mist shader
   5.5.2 Shader list
      5.5.2.1 A Shader list to hold multiple shaders
   5.5.3 Beam shader
      5.5.3.1 Adding a Beam shader to the Shader list
   5.5.4 Night shader
      5.5.4.1 Using a Night shader to fool the eye

5.6 Hidden shaders

**Chapter 6: Special effects**

6.1 Introduction

6.2 Materials and shaders effects
   6.2.1 Animated maps
      6.2.1.1 Accurately sizing an animated mask map
   6.2.2 Using animated maps as masks
      6.2.2.1 Masking the Blend material
   6.2.3 mental ray material and Material to Shader map
      6.2.3.1 3D Displacement with Blend material in mental ray

6.3 Lighting effects
   6.3.1 Caustics effects
      6.3.1.1 Reflective caustics
      6.3.1.2 Refractive caustics
   6.3.2 Volumetric effects
      6.3.2.1 Adding volume to blinking lights

6.4 Rendering effects
   6.4.1 Atmospheric effects
      6.4.1.1 Fire Effect 3D clouds
   6.4.2 Motion blur effect
      6.4.2.1 Enabling motion blur object properties
      6.4.2.2 Enabling motion blur in the renderer
      6.4.2.3 Fast Rasterization for rendering efficiency
      6.4.2.4 More motion blur
   6.4.3 Depth of field
      6.4.3.1 Depth of Field (mental ray)
      6.4.3.2 Depth of Field (mental ray) in the real world
   6.4.4 Contour rendering
      6.4.4.1 Contour renderer component
      6.4.4.2 Contour material component
      6.4.4.3 Contour Composite (contour) shader
      6.4.4.4 Contour material shaders
6.4.5 Matte/Shadow/Reflections shader
  6.4.5.1 Viewport background
  6.4.5.2 Environment background
  6.4.5.3 Matte/Shadow/Reflections (mi) material
  6.4.5.4 Product rendering against a white background

6.5 Viewport effects
  6.5.1 Introduction to mr Proxy objects
  6.5.2 Geometry proxy
    6.5.2.1 Creating a mr Proxy
  6.5.3 Creating multiple proxies at once
  6.5.4 Using mr Proxy in Particle Flow

Chapter 7: Revit and mental ray®
7.1 Introduction to Revit
7.2 FBX import
  7.2.1 FBX tips
    7.2.1.1 Import FBX file
    7.2.1.2 Scene troubleshooting
  7.2.2 Scene troubleshooting
7.3 ProMaterials
  7.3.1 ProMaterial type
    7.3.1.1 A look at ProMaterials
  7.3.2 Imported ProMaterials
    7.3.2.1 Imported ProMaterials
    7.3.2.2 ProMaterials can be inflexible
7.4 Large scenes
  7.4.1 Efficiency
    7.4.1.1 Objects and polygons
  7.4.2 Coordinate systems
    7.4.2.1 Centering a scene on the 3ds Max origin
7.5 Camera composition
  7.5.1 Rule of Thirds
  7.5.2 Camera shots
7.6 Architectural animation
  7.6.1 Camera motion and scene editing
    7.6.1.1 Camera motion
    7.6.1.2 Scene editing
  7.6.2 Flicker-free animation
    7.6.2.1 Flicker reduction for animation

Summary

Index
